it usually goes down to the spinal canal
since it was a critical defect, I immediately informed the test lead
the skin over the affected area may be red and the area around the plug may feel full even after a feeding
indeed, matab titres higher than 140 in the haemaglutination inhibition (hi) test can still inhibit vaccine uptake
whereas such titres do not prevent field virus infection
had prescribed some medicine for type 2 diabetics I also have acid reflux which set everything in pain
